Subject: RE: PPDC and PFAS

Hi Jeff—

Ed had the following lines as bullets in his presentation of general OPP Updates at the PPDC meeting that took place May 12-13. That's all so far and nothing is planned. The next meeting is scheduled to occur October 27-28.

In September 2020, EPA became aware of PFAS contamination of a mosquito control product used in Massachusetts.

In December 2020, EPA studied the fluorinated high-density polyethylene (HDPE) containers used to store and transport the product and preliminarily determined the fluorination process used may be the source of the contamination.

In March 2021, EPA became aware of a second mosquito product, used in Maryland, that may be contaminated with PFAS. The product is distributed in stainless steel containers
The data EPA has collected indicates that the amount of PFAS from the contamination in the containers is extremely small.

The data EPA has collected indicates that the amount of PFAS from the contamination in the containers is extremely small.

EPA is investigating how to evaluate potential impacts on health and/or the environment.

Of the two products identified to date, one manufacturer has voluntarily stopped shipment of any products in HDPE containers. The second product is shipped in stainless steel and EPA is exchanging information with the organization who conducted the testing as well as the affected registrant.

Shannon

Shannon

Has there been any discussions of PFAS in PPDC? Or is it on the horizon?

Thanks

Jeff
